

**ezyCargo™**

Linking the World

Changing the World

## ezyCargo™ Advantage

Ezycargo™ (previously known as Traxon-HK) is regarded as Asia's leading multi-carrier cargo portal and is a forerunner of Electronic Data Interchange (EDI) in the freight industry. It has earned its reputation as a flexible and reliable network that allows seamless information exchange between carriers and freight forwarders.

Traditionally, freight forwarders have to spend an inordinate amount of time checking cargo space availability, making cargo space reservations and tracking shipment status from each carrier's website. By subscribing to Ezycargo™, freight forwarders anywhere in the world can now gain 24/7 access to real-time global flight schedules of over 30 international carriers, directly book and track shipments and effectively manage air waybill distribution of multi-carriers on a single platform.

waybill

Moreover, Host-to-Host (H2H) connections can easily be set up via Ezycargo™ to allow rapid, efficient and secure transmission and retrieval of cargo information between client in-house IT systems and carrier host-systems. Forwarders of all sizes can benefit from H2H which also facilitates easy cross-usage of stored air waybill data for other business operation purposes.

Ezycargo™ is here for freight forwarders of all sizes to handle time-critical transactions and to prepare for a paper-free cargo future!

## We Deliver

### “ Real-Time Checks on 30+ International Carrier Flight Schedules ”

Ezycargo™ enables single or multiple flight schedule checks, providing a genuine shortcut to space reservation with a mouse-click! Simply type in the origin, destination code and choose the departure date with preferred carrier(s) to retrieve the schedule from the respective carrier(s) within seconds.

### “ One-Stop All-Inclusive Electronic Booking Tool ”

Ezycargo™ offers a variety of e-booking options to suit users' specific needs allowing them to perform single, routine, multiple and spreadsheet bookings from a single source.

**Single booking** - supports the booking of a single space for any ad-hoc shipment catering for various types of shipment services provided by individual carriers.

**Routine booking** - caters for regular cargo space reservations. Recurrent shipment data is retrieved automatically - eliminating the need to tediously re-enter such details manually every time, bringing users significant time savings.

**Multiple booking** - offers users the flexibility to create reservations for multiple shipments (up to 30 air waybills) grouped in accordance with carriers and/or destinations.

**Spreadsheet booking** - supports booking data created on MS-Excel files. Users can quickly import booking data from their in-house systems and, with the click of a mouse, instantly upload all the relevant data to Ezycargo™.

## “ Proactive Shipment Monitoring ”

Ezycargo™ utilises advanced secure-connection protocol to ensure seamless two-way information exchange between carriers and freight forwarders. Moreover, the system provides users with the flexibility to track the very latest point-to-point shipment movements.

An additional built-in feature of Ezycargo™ (compliant with Cargo2000 requirements and quality objectives) allows users to generate a variety of web-browser-based quality management reports including: service performance, shipment status and departure status. In this way, freight

forwarders can oversee the performance of their shipments throughout their journey, helping them to take timely action to manage any shipment irregularities. For more details, please see details of our EDMP™ service.

## “ Multiple Allotment Booking Tool ”

Ezycargo™ empowers users to swiftly manage all allocated cargo spaces from either individual or multiple carriers. Ezycargo™ generates booking records based on user-allocations, minimising data entry for multiple allocations with the use of a “multiple booking” function to book them all simultaneously. This means that users’ allotments will be automatically updated every time a shipment booking is confirmed.

## “ Hassle-Free Air Waybill Stock Management ”

Ezycargo™ enables users to place an electronic order of neutral air waybills endorsed by participating carriers, helping them monitor the usage of air waybill stock. Ezycargo™ will regularly update users with the current air waybill stock status and warn them when their stock level falls below a pre-defined limit.

This enviable and extremely powerful one-stop cargo information-management system handles functions including but not limited to:

- ▶ Reservations
- ▶ Shipment monitoring
- ▶ Air waybill data transmission
- ▶ Air waybill stock management

Helping the freight community build value and avoid crises:

**Ezycargo™, the ultra-performance cargo portal, is here to meet all your shipment management needs.**

## Why ezyCargo™

- ▶ Single gateway: provides a one-stop web-based platform, handling shipment booking and monitoring in addition to air waybill distribution for multiple carriers.
- ▶ Reliability and efficiency: electronic transmission of all shipment information significantly enhances reliability and efficiency compared to manual data processing.
- ▶ Cost-effectiveness: improves operational efficiency, reduces paperwork and costs.
- ▶ Peace-of-mind: allows online management of all shipment processes.
- ▶ Quality services for shippers: provides real-time 24/7 responses from multiple carriers.
- ▶ Conformity: provides standardisation of business procedures.

## Value-added Services

To remain competitive, Ezycargo™ provides a wide variety of unparalleled value-added services for users and the global freight community.

We can customise solutions to meet customers' exact requirements. Whether you are a global or local scale freight forwarder, a vast array of value-added services with great flexibility can be created to serve your specific needs.

Value-added services to handle Co-load, CUSEXP Terminal functions, ULD equalisation, Mix pre-pack and Trade declaration functions have already been designed for use with Ezycargo™.
